

- Airbag
- Gas generator
- Seat belt pretensioner
- SRS control unit
- Active pedestrian protection system
- Gas strut / Pre-loaded spring
- Low-voltage battery
- Petrol fuel tank
- Battery pack, High-voltage
- High voltage power cable
- High voltage component
- Cable cut
- Low voltage device that disconnects high voltage

Note: Please see our [emergency response guide](#) for more information

1. Identification / recognition

3. Disable direct hazards / safety regulations

Deactivation of the high-voltage system

In all other cases, the high-voltage system should be deactivated as follows:

Option 1: High-voltage disconnect

The high-voltage disconnect is located in the engine compartment on the passenger side.

- (1) Pull the release
- (2) Push the release down
- (3) Pull out the switch

Option 2: Alternative high-voltage disconnect

The alternative high-voltage disconnect is located under the cover of the fuse box in the cockpit on the driver's side. It is indicated with a sign.

Remove the cover (1). Cut the cable at the marked point (2).

Disconnecting the 12 V battery

- 1. Remove the cover from the 12-volt battery in the engine compartment.
- 2. Disconnect the negative cable of the 12-volt battery at the screw connection and secure it against unintentional contact.
