

- ① On-board electrical system battery
- ② Additional battery
- ③ High-voltage battery
- ④ High-voltage disconnect device
- ⑤ Alternative high-voltage disconnect device, left-hand drive
- ⑥ Alternative high-voltage disconnect device, right-hand drive
- ⑦ HV charge socket

 Airbag	 Gas generator	 Seat belt tensioner	 Gas-filled strut	 Fuel tank
 Restraint systems control unit	 12 V Battery	 High-voltage battery	 High-voltage components	 High-voltage disconnect device
 Alternative high-voltage disconnect device	 Pedestrian protection	 Beltbag		

Note: Please see our [emergency response guide](#) for more information

1. Identification / recognition

2. Immobilisation / stabilisation / lifting

Parking brake

Press the P switch on the gear selector (1). The parking brake is automatically activated. Electric parking brake (1)

3. Disable direct hazards / safety regulations

Switch off the ignition:

1. Press the START/STOP button without actuating the service brake.
2. Keep the electronic vehicle key at a distance of at least 5 m.

 The absence of engine noise does not mean that the vehicle is switched off.

 A restart is possible until the vehicle is switched off.

Deactivation of the high-voltage system

 The high-voltage system is automatically switched off in the event of accidents in which the airbags and seat belt pretensioners trigger.

In all other cases, the high-voltage system should be deactivated as follows:

Option 1: High-voltage disconnect

The high-voltage disconnect device is located on the right at the rear under the cover of the trunk recess. The recess lining is pulled out of the trunk by the tab below the trunk sill in the center of the vehicle.

- (1) Pull the release
- (2) Push the release down
- (3) Pull out the switch

Option 2: Alternative high-voltage disconnect

The alternative high-voltage disconnect is located under the cover of the fuse box in the cockpit on the driver's side. It is indicated with a sign.

Remove the cover (1). Cut the cable at the marked point (2).

In order to ensure that there is no longer any residual voltage in the high-voltage system, wait approx. 20 seconds after switching it off.

The passive safety systems such as airbags and seat belt pretensioners will continue to be supplied with power by the 12-volt electrical system.

Disconnecting the 12/48 V battery

- 1. Remove the cover from the 12/48-volt battery in the boot.
- 2. Disconnect the negative cable of the 12/48-volt battery at the screw connection and secure it against unintentional contact.

8. Towing / transportation / storage

Only transport the vehicle with both axles on a tow truck or car transporter.

Maintain a safe distance from other vehicles.

Warning: Battery re-ignition
