In all other cases, the high-voltage system should be deactivated as follows:

Option 1: High-voltage disconnect

The high-voltage disconnect is located in

the engine compartment on the

passenger side.

(1) Pull the release (2) Push the release down (3) Pull out the switch

Option 2: Alternative high-voltage disconnect

The alternative high-voltage disconnect is located in the base of the right-hand front seat. It is indicated with a sign.

ه

Remove the cover (1). Cut the cable at the marked point (2).

In order to ensure that there is no longer any residual voltage in the high-voltage system, wait approx. 20 seconds after switching it off.

The passive safety systems such as airbags and seat belt pretensioners will continue to be supplied with power by the 12-volt electrical system.

Disconnecting the 12 V battery

1. Remove the cover from the 12-volt battery.

2. Disconnect the negative cable of the 12-volt battery at the screw connection and secure it against unintentional contact.

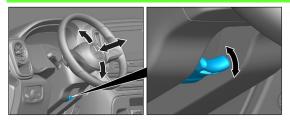

The passive safety systems (airbags and seat belt pretensioners) are deactivated.

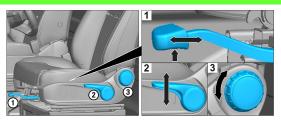

4. Access to the occupants

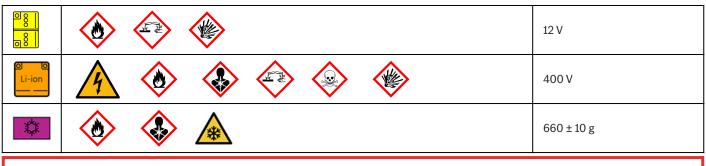

Steering wheel adjustment

Seat adjustment (mechanical)

When rescuing the vehicle occupants, the components of the restraint systems (in particular pyrotechnic elements) must be taken into account in accordance with the information on page 1.

5. Stored energy / liquids / gases / solids

All high-voltage cables have orange insulation.

6. In case of fire

Use large volumes of water (H $_2$ O) to extinguish a vehicle fire. Use large volumes of water (H $_2$ O) to cool the Li-ion battery.

Warning: Ignition of the battery possible

If coolant is leaking from the high-voltage battery, it may become unstable owing to thermal overload. Check the battery temperature with an IR thermal imager.

7. In case of submersion

There is no risk of voltage in the bodywork.

After recovery of the vehicle:

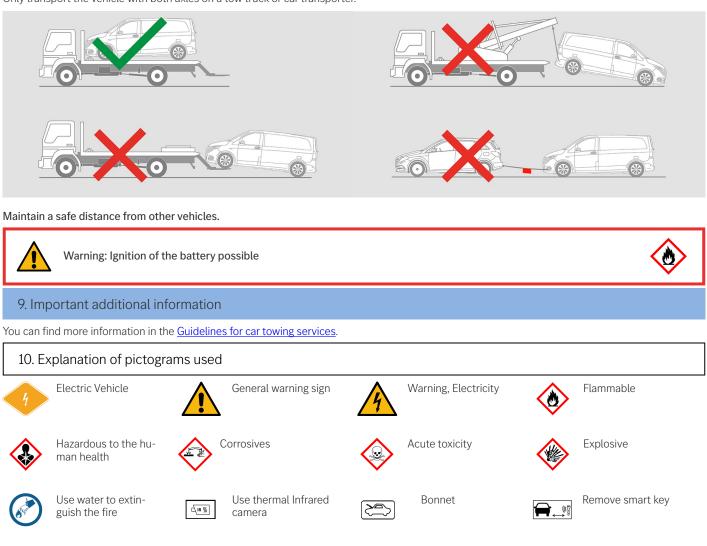

- 1. Allow the water to drain out of the interior.
- 2. Commence deactivation of the high-voltage system (see Section 3).

8. Towing / transportation / storage

Only transport the vehicle with both axles on a tow truck or car transporter.
