

-  Airbag
-  Gas generator
-  Seat belt pretensioner
-  SRS control unit
-  Active pedestrian protection system
-  Gas strut / Pre-loaded spring
-  Low-voltage battery
-  Battery pack, High-voltage
-  High voltage power cable
-  High voltage component
-  Cable cut
-  Low voltage device that disconnects high voltage

Note: Please see our [emergency response guide](#) for more information

1. Identification / recognition

3. Disable direct hazards / safety regulations

Deactivation of the high-voltage system

In all other cases, the high-voltage system should be deactivated as follows:

Option 1: High-voltage disconnect

The high-voltage disconnect is located in the engine compartment on the passenger side.

- (1) Pull the release
- (2) Push the release down
- (3) Pull out the switch

Option 2: Alternative high-voltage disconnect

The alternative high-voltage disconnect is located under the cover of the fuse box in the cockpit on the driver's side. It is indicated with a sign.

Remove the cover (1). Cut the cable at the marked point (2).

Disconnecting the 12 V battery

- 1. Remove the cover from the 12-volt battery.
- 2. Disconnect the negative cable of the 12-volt battery at the screw connection and secure it against unintentional contact.
