

① Battery 12 V

② High-voltage battery

③ High-voltage disconnect device

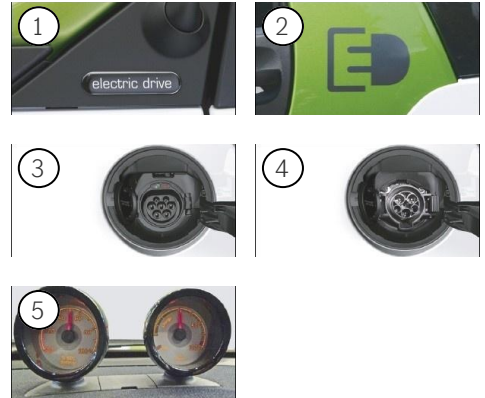

④ Windowbag (USA only)

Note: Please see our [emergency response guide](#) for more information

1. Identification / recognition

3. Disable direct hazards / safety regulations

Deactivation of the high-voltage system

In all other cases, the high-voltage system should be deactivated as follows:

High-voltage disconnect

The high-voltage disconnect device is located on the underside of the instrument panel on the left side.

Pull connector (1) out of bracket

In order to ensure that there is no longer any residual voltage in the high-voltage system, wait approx. 20 seconds after switching it off.

The passive safety systems such as airbags and seat belt pretensioners will continue to be supplied with power by the 12-volt electrical system.

Disconnecting the 12 V battery

1. Remove the cover from the 12-volt battery.
2. Disconnect the negative cable of the 12-volt battery at the screw connection and secure it against unintentional contact.
